

Task(9.2)

Write a C++ program to sort an array of integers in ascending order using function pointers. Allow the user to choose between different sorting algorithms (e.g., bubble sort, selection sort) using function pointers.

Example:

Input:

Enter the number of elements

5

Enter 5 integers:

50 70 80 -7 10

Choose a sorting algorithm:

1. Bubble Sort

2. Selection Sort

Enter your choice (1 or 2): 1

Output:

Sorted array: -7 10 50 70 80

Thank You
