Task(3)

1) Create 2 text files, 1 file using (nano / vim), and the other using cp command.

2) Edit the second file by adding any text to it.

3) Use diff command to display the added text.

4) Use grep to search for a pattern and display the line contains the pattern.

5) Use piping to have the output from a command to be the input to another (I.e compile a C++ program and put the output to a file**).**

Thank You
