Task(8.4)

Problem Statement:

1. **Declare a static array of integers and initialize it with some values.**
2. **Write a function that accepts the array as a parameter and prints the size of the array and the size of its elements inside the function.**
3. **Print the size of the array and its elements in the main function.**
4. **Demonstrate that sizeof inside the function only gives the size of the pointer and not the total size of the array.**

Thank You
